Subject: Sewage Treatment

I ahve just this week become aware of the proposed sewage treatment plant expansion, and am alarmed at the fact that so residents are aware of the implications of such an expansion.1

Why are we handling Milton's sewage?

Have other methods of handling sewage been studied?

Why was odour not addressed. I live near the lake, and the smell from the lake at times is unbearable. I understand that this is a result of effluent going into the lake.

If the odour from the lake now is so bad, what would be the odour when there is a 700% plus increase in the sewage processed.

Please delay this decision, and have more research done.
